

# Lasso™ ties more of your classroom audio together

## Exceptional sound for exceptional media needs

**F**rontRow Lasso is the workhorse analog option for schools with above-average connectivity needs — media centers, computer labs, and other demanding instructional spaces.

With four audio input options – plus two more on the mics – Lasso reproduces your media in beautiful, full stereo. What’s more, a field-installable page override module gives you the option to mute Lasso whenever a central announcement comes on.

### Sets up fast

Rack-mountable and compatible with FrontRow’s patent-pending IR Speakers, Lasso can be installed significantly faster than other sound systems. Each speaker unit combines three speakers with an infrared sensor and a single cable, so installers can dramatically reduce time and cost.

### One-touch operation

Teachers just turn on the mic to start teaching. The receiver automatically wakes up from its energy-saving mode, and goes back to sleep when the mic is turned off.

### Save money (and the planet)

Lasso uses up to 63% less energy than other systems, making it a smart choice for both schools and the environment.

### SmartCharge™ peace of mind

The top killer of electronics is accidental recharging of alkaline batteries. Lasso’s SmartCharge technology only charges batteries that are safe to charge – protecting your investment for years to come.

### RECEIVER & SPEAKERS

- Economical analog stereo sound
- Energy-saving sleep mode — wakes up when teachers start speaking
- Optional page override module
- EnergyStar® qualified — more than 60% energy savings

### TEACHER MIC

- Light and comfortable ergonomic design stays stable even when leaning to help a student
- Prominent, easy-to-find mute button
- 2 directional mics reduce signal reduction with head movement

### STUDENT MIC

- Encourages participation and orality
- Easy to hold, even for small hands — just 14.6cm/5.7in tall
- Lavalier/hands-free option
